

How tall is a server rack?

Rackmount cases can usually be adapted for both 19 and 23 inch racks with use of mounting brackets. For measuring the height of server equipment, rack units are used. One rack unit is equal to 1.75 inches and is often shortened to U or RU. A server rack is typically 42U tall, though there are many other sizes available.

What is a tower server chassis?

Suitable for small business or startup companies, the tower server chassis can be configured as entry server or high-end pc with the storage expansion. Big capacity ensures the hardware flexibility and cooling. As a leading computer case provider, we offer high-quality server case solutions tailored to our clients' needs.

What is a server case?

A server case is an enclosure that houses important components such as the motherboard, processor, storage drives, network interface controllers, and more. There are several types of server cases and the size of your organization's network influences the type of case you use.

What is a rackmount server case?

A rackmount server case is an enclosure with standardized dimensions to fit a server rack. It is geared towards organizations that need to densely pack multiple servers into one area. Because rackmount servers can generate great amounts of heat, having them in a temperature-controlled room is recommended.
