

## Are upsd Server Rack double door still all steel

How to choose a server rack with a glass front door?

The first option is a server rack with a glass front door. Buying a patch rack with a glass door has three advantages: The rack has a glass front door and a rear door of standard sheet steel. The door has a sturdy steel frame with small ventilation holes. In between, there is a clear glass panel, giving the rack a sleek design.

Why should you choose a rack with split rear doors?

Racks with split rear doors are an excellent solution for larger companies where a dedicated IT/server room is often set up. In a server room, there are often more IT-related items. Therefore, the available space must be efficiently organized. This is possible because racks with split doors can be placed closer to the back wall.

How does a server rack work?

In the server rack, you place everything related to the IT network, including routers, servers, and lots of cables. When these devices are on, they generate heat. This heat needs to exit the server rack to prevent damage to the equipment. This is achieved either through built-in fans or perforated doors.

What is a split rear door rack?

Split doors consist of two perforated parts. These are 800 mm wide patch racks with a height of 42U or 47U. Racks with split rear doors are an excellent solution for larger companies where a dedicated IT/server room is often set up. In a server room, there are often more IT-related items.
