How much space do electricians need in front of electrical panels?

The NEC requires a minimum of 3 feet(0.9 meters) of clear working space in front of electrical panels. This space must be free of any obstructions to allow safe access and maintenance. The 3-foot clearance ensures that electricians have enough room to work safely without the risk of contact with live parts or equipment.

How far away should electrical panels be positioned?

Clear Working Area: OSHA requires a specific amount of clear working space around electrical panels to facilitate safe operation and maintenance. The minimum clear distance is generally 3 feet(0.9 meters) in front of the panel,although this can vary depending on the situation and the type of electrical equipment involved.

How wide should a working space be in front of electrical equipment?

Article 110.26(A)(2)--Specifies that the width of the working space in front of the electrical equipment shall be the width of the equipment or 30 inches(762 mm),whichever is greater. The goal is to prevent a worker from being unduly crowded when testing or maintaining equipment. The width of the working space is a factor regarding worker safety.
