

What are industrial battery enclosures?

They are designed with different kinds of racking solutions and ventilators for heat dissipation. The specific design of these enclosures allows them to be pole, wall or above/below the ground mounted systems. The base is reinforced which increases the load bearing capacity for industrial batteries.

How should a battery enclosure be insulated?

Avoid direct sunlight on the battery enclosure, by shading it if necessary. Use light-coloured enclosures if possible. Allow plenty of air circulation by providing sufficient air space and ventilation. Do not use a heavily insulated enclosure--this retains internal heating.

How can a battery enclosure be commercially viable?

This approach targets elimination of inert mass of the battery enclosure by placing the battery cells within the structural components with no, or minimal, modification done to the cells. It is therefore commercially viable approach since it introduces no changes to the battery production line and therefore reduces the cost of the final product.

What is a battery enclosure made of?

The most common battery enclosures are made from plastic materials that are resistant to alkaline solutions and have a high impact strength. Metal housings are sometimes used, but metal requires careful design and assembly to avoid shorting of the cells in the battery pack.
