

Best 30 Gallon underground housing IP55 IP65s

What is the difference between IP55 and IP65 enclosures?

Just like IP55, it can also handle water jets from any direction. But IP65 enclosures are usually built stronger, so they last longer in rougher conditions. In short, IP65 gives better protection, especially if you're dealing with lots of dust or moisture.

What is a rated IP55 enclosure?

Let's take a closer look at each rating. An enclosure rated IP55 offers limited protection from dust--enough to prevent it from interfering with equipment--but it's not completely dust-tight. It can also handle low-pressure water jets from any direction, like rain or a light hose spray.

Can IP55 be used outdoors?

Yes, IP55 can be used outdoors, but only in protected areas --like under a roof, canopy, or awning. It can handle light rain or splashes, but it's not ideal for open, exposed locations where heavy dust or direct water is common.

Are IP65 enclosures a good choice?

Common use cases: IP65 enclosures offer stronger protection and are built for tougher environments. They're completely sealed from dust and can withstand high-pressure water jets, making them a reliable option for both outdoor and industrial settings.
