Do you need multiple AC units in a data center?

As under the ceiling units are quite efficient, you don't need to install multiple server room ACs in your data center, which helps to save on installation costs. Without multiple units, you can also free up valuable wall space. 3. Cassette Air Conditioners A mini-split recessed into the ceiling is called a cassette air conditioner.

Does a server room need an AC unit?

They require dedicated server room air conditioners to help cool the servers and provide a climate-controlled environment. While large air conditioning units can be expensive to operate, mini-split AC units are among the best options for cooling data centers, especially if the data center is small.

Do you need to increase rack cooling capacity?

End users may assume that they need to increase cooling capacity, but this is expensive and often unnecessary. In most cases, low-cost rack cooling best practices will solve heat-related problems. Best practices optimize airflow, increase efficiency, prevent downtime and reduce costs. Data centers do not need to be kept freezing cold.

Does a high wattage rack need backup cooling?

Intake temperatures will rise, but won't impact system availability as long as they don't exceed 32.2°C. If the nominal backup runtime is relatively long (more than 30 minutes), you may need to provide backup cooling. This is especially true for high-wattage racks or a data center already close to its heat capacity.

By circulating cool air around the equipment, server room air conditioners help to prevent server shutdowns and safeguard against data loss. In addition, they can also help to extend the life ...

Rear Door Heat Exchanger (RDHx): A liquid-cooled door is mounted on the back of the rack to absorb heat as air exits. RDHx requires no additional floor space and can significantly ...

For situations where you need servers outside a traditional data center (like in industrial settings) or need robust, targeted cooling, specialized cabinets with built-in AC are available.

Passive heat removal solutions help you remove heat from your racks and your data center without introducing additional energy costs. You can use a simple, straightforward version of passive heat ...
