

Casing underground the outdoor

What is a pipe casing?

Casings are also known as Encasement pipe, which comprises steel tubes that are utilized for gas and oil underground operations. It protects a utility system from detrimental factors. Pipe casing plays a huge role in underground operations and is also considered an important material in wells.

What is a CASING DRILLING system?

A casing drilling system combines the traditional drilling process with the casing procedure. It allows casing to be drilled and inserted into the ground simultaneously, eliminating the need for multiple operations.

How to install a pipe casing?

There are two principal ways of installing a pipe casing: Trenchless Construction: This is a more flexible approach than the general practice of building trenches. The use of rammed pipes whereby holes are drilled or horizontal drilling is undertaken. It is so that a pulled pipe can be made through the hole.

What is a casing in a well?

Casing is a large diameter pipe that is assembled and inserted into a recently drilled section of a borehole. Similar to the bones of a spine protecting the spinal cord, casing is set inside the drilled borehole to protect and support the wellstream. The lower portion (and sometimes the entirety) is typically held in place with cement.
