What are the advantages of a data center cooling system?

Ultra-efficient free-cooling with no outside air in the data center. Cooling capacity up to 400 kW. Low pPUE and low water consumption. Water recirculation system and multi-stage water quality control. Minimized or eliminated need for mechanical cooling.

How many kW can a data center cooling system handle?

Capable of cooling up to 300kW per rack or across neighboring racks, it effectively manages heat in power-intensive environments, ensuring your data center infrastructure remains optimized for next-generation workloads.

What is a data center cooling enclosure?

Together, the IT rack enclosure and the data center cooling enclosure form an efficient closed-loop cooling system. POD enclosures protect equipment from physical and environmental conditions found in factories, warehouses and other edge computing locations. Power and data cables are separated from cooling lines, protecting them from moisture.
