

Does battery cabinet rail enclosure go over IP55 IP65

What is the difference between IP55 and IP65 enclosures?

In controlled environments, IP55 provides reliable everyday protection at a lower cost than fully sealed alternatives. An IP65 enclosure is fully dust-tight, allowing zero dust ingress even under test conditions. It uses stronger seals, tighter gasketing and more robust construction compared to IP55.

What is the difference between IP55 & IP65 rated cabinets?

IP55: Electrical panels in non-sterile hospital zones where periodic sanitization occurs. IP65+: Laboratories, operating rooms with frequent disinfection procedures. Our stainless-steel IP-rated cabinets comply with hygiene-critical applications, ensuring cleanability and resistance to medical-grade cleaners.

What is an IP65 enclosure?

An IP65 rating means the product is completely protected from dust--none can get inside. That makes it great for dusty places. Just like IP55, it can also handle water jets from any direction. But IP65 enclosures are usually built stronger, so they last longer in rougher conditions.

What is an IP55 enclosure?

An IP55 enclosure is designed to protect against harmful dust levels and low-pressure water jets from any direction. It prevents dust buildup that could interfere with operation but does not fully seal the enclosure. In controlled environments, IP55 provides reliable everyday protection at a lower cost than fully sealed alternatives.
