

What is a dust protection rating?

A rating like IP55 offers some protection, but it's not fully sealed-- dust might still find its way in, though not in amounts that would interfere with the device's operation. A rating like IP65 or higher (e.g. IP66, IP67, IP68) means the enclosure is fully dust tight, designed to block 100% of dust particles under standard test conditions.

Why should you choose a high dust protection enclosure?

Choosing an enclosure with a high dust protection rating helps maintain reliability even in harsh,high-traffic settings. Some electronics just can't tolerate even the smallest bit of dust. Think medical equipment,lab instruments,or precision control systems.

What kind of dust collectors do you offer?

We offer advanced-technology cartridge dust collectorsand a variety of filter media that conquer the challenges of most types of industrial dusts,including pharmaceutical,chemical,grain,bulk/powder,food,metal and others.

Why do you need a dust proof IP rating?

If your equipment lives outdoors,it's constantly exposed to wind-blown dust,sand,pollen,and other debris. Over time,even tiny particles can sneak in and cause malfunctions. A dust proof IP rating helps keep your outdoor devices running smoothly--rain or shine,storm or drought. Have devices tucked away in hard-to-reach places?

Celebrating 40 Years In the Dust Filter Industry We are a leading manufacturer of dust collector bags, dust filter socks, baghouse filter bags, accessories and services for industrial air pollution control. We ...

As the particles lose their velocity, they drop lower in the cyclone until they drop into the receptical below. The Donaldson Cyclone dust collector uses a mechanical ...
