

Should you design and 3D print your own electronic enclosures?

Instead of buying off-the-shelf boxes that never quite fit, why not design and 3D print your own custom electronic enclosures? With 3D printing, you can create perfectly tailored cases for any circuit board, sensor, or display--adding mounting features, cable channels, and ventilation exactly where you need them.

Why should you use 3D printed enclosures?

3D printing offers a level of customization and flexibility that off-the-shelf enclosures simply can't match. Whether you're a hobbyist or a startup, 3D printed enclosures can significantly accelerate your project timeline. Before jumping into CAD, collect all your enclosure requirements:

Should you make an enclosure for an electronic project?

Making the enclosure for an electronic project is not glamorous, but it is super helpful to hide the horrible cable management keep things in place. Getting it right can be tricky though, especially if you are in a hurry. So I've made this 3D printable enclosure which can be quickly customized to fit your project.

What are the different types of 3D printed enclosure connections?

Snap fits, interlocking joints, threaded fasteners, and living hinges are all viable options for 3D printed enclosure connections. Designing snap-fits and push-fits for an enclosure that does not require repeated opening is much easier because the joint does not have to be as wear-resistant.
