

What is an electrified push panic bar?

How does it look? A panic bar is a piece of physical security infrastructure that can be installed on a door, and is designed to help you exit in the event of an emergency. It's designed specifically to be easily opened even by someone panicking, hence the name.

What is an electronic push bar lock?

An electronic push bar lock or panic bar is a piece of a security and safety system that allows people to exit quickly in the event of an emergency. It's an added safety measure that can literally be the difference between life and death. Other common names for a panic bar include electric panic bar, crash bar, and electric crash bar.

What is a push bar?

A push bar, also known as a panic bar or crash bar, allows the user to open the door by pressing the push rail or crossbar. Its main purpose is to enable the user to exit the site in case of an emergency without prior knowledge of the exit plan.

Can you wire a bar to an emergency alarm?

Given that these are usually used on emergency exits, often offices or facilities will choose to wire the bars to alarms, so that if you open it, the system recognizes it as an emergency, and the emergency alarm will sound in your building. This eHow guide gives a definitive overview of the strike and wiring procedures!
