What is a containerized battery energy storage system?

Containerized Battery Energy Storage Systems, or BESS, are modular, scalable energy storage solutions that integrate batteries, PCS, BMS, EMS, and thermal management within a standard container. They store energy from renewables or the grid and discharge it when needed, enabling peak shaving, load shifting, and grid support.

What are commercial energy storage systems?

Commercial energy storage systems are facilities like businesses, industrial parks, charging stations and virtual power plants (VPP) to control how they use energy, set electricity prices and tackle blackouts in a flexible and smart way.

Can a small business use a battery storage system?

Check out the battery storage guide for small businesses. Commercial battery storage systems can either be used on-grid or off-grid. On-grid applications offer functions such as peak demand charge reduction, renewable energy sources integration, and power backup during outages.

What is a large-scale battery storage system?

Unlike commercial systems for small and medium businesses, large-scale commercial systems usually range from 100 kW to MW-level utility projects and are engineered for higher capacities, scalability, and complex operational needs. Check out the battery storage guide for small businesses.
