

What is a hybrid power station in Malaysia?

Supports Malaysia's commitment to reducing greenhouse gas emissions. Hybrid power stations combine multiple energy sources, such as solar, wind, and diesel, to provide a reliable and sustainable energy supply. These stations are particularly useful in remote areas where grid connectivity is limited.

What technology is used in generating electricity in Malaysia?

The technology in generating the electricity varies depending on the type of energy used in the plant. In Malaysia, most of the energy sources used in the power plants are from the fossil fuels (coal, natural gas, and petroleum), hydro and renewable energy sources (solar, biomass, mini-hydro). Coal is typically sourced domestically or imported.

Are oil-fired power stations still used in Malaysia?

Oil-fired power stations are less common in Malaysia due to the high cost of oil and its environmental impact. However, they are still used in certain regions, particularly in Sabah and Sarawak. Gelugor Power Station (Penang): With a capacity of 398 MW, this station provides backup power to the northern region.

What role do power stations play in Malaysia's future?

From the massive Bakun Dam in Sarawak to the efficient gas-fired plants in Peninsular Malaysia, each power station plays a vital role in ensuring a stable and reliable electricity supply. As Malaysia continues to grow, the focus on renewable energy and sustainability will shape the future of its power generation landscape.

The only power utility in Sabah, SESB is committed to developing the electricity infrastructure in the state of Sabah and the Federal Territory of Labuan through generation, transmission and distribution.
