

## How far above self-cooling should enclosure be

How much space does an outdoor AC unit need?

It's important to ensure that you have enough clearance around all sides of the outdoor unit; here's what you should know. At the bare minimum, you should have at least one foot (12") of space on each side of your outdoor air conditioning unit. That said, some AC manufacturers suggest that you have at least two feet (24") of clearance on all sides.

How much space should I leave on my AC?

At a minimum, you should leave at least one foot of clearance on all sides, but two feet is generally recommended for optimal airflow and cooling effectiveness. This space allows for proper air circulation, which directly impacts your AC's ability to cool your home effectively.

How far apart should outdoor AC units be positioned?

You should also have 60" minimum of vertical space above the unit for air to properly circulate throughout the HVAC system. If you place two outdoor AC units too close together, the airflow from each could impact both systems. The minimum recommended distance between two outdoor units is four (4) feet.

How far should a HVAC system be from a wall?

Rear Clearance: At least 24 inches from walls or fences. Front Clearance: 36 inches on the service access side for technician workspace. Top Clearance: Minimum of 60 inches (5 feet) for proper exhaust of hot air. Do not stack objects, place planters, or install enclosures closer than the recommended distances.
