

How do I choose a battery for my AC unit?

For AC units, you'll want to focus on these types: Lithium Iron Phosphate (LiFePO4) Lithium-Ion (Li-ion) When choosing battery capacity, look for batteries rated in amp-hours (Ah) or watt-hours (Wh). A good starting point is a 100Ah 12V battery (1,200Wh) for small AC units. An inverter is the bridge between your batteries and your AC unit.

Can you use a lithium battery to power an AC unit?

For larger AC units, using lithium batteries is possible, but you'll need to manage your power carefully. A 100 Ah lithium battery can typically power a 15,000 BTU AC unit for about 30 to 45 minutes. With a bank of six 100 Ah batteries, you can get around three to four hours of cooling--ideal for the hottest part of the day.

How do I Keep my AC running on battery power?

Getting the most out of your AC unit while it's running on battery power is essential for extending battery life and keeping cool. One effective way to do this is by adding a soft start kit, which helps reduce the initial power surge when the AC kicks on. This protects your batteries and allows the system to run more smoothly.

Can a 12V AC unit run on a lithium battery?

For smaller RVs, a 12V air conditioner might be a simpler option since it doesn't require an inverter and can run for a few hours on a single battery. For larger AC units, using lithium batteries is possible, but you'll need to manage your power carefully. A 100 Ah lithium battery can typically power a 15,000 BTU AC unit for about 30 to 45 minutes.
