

Honestly, I'd go with MDF. The MDF will be more dimensionally stable; it won't expand or contract with changes in humidity or temperature. Even plywood with change enough between winter and summer ...

Key takeaway: Sometimes we need to multiply or divide the entire integral by a constant, so we can achieve the appropriate form for  $u$ -substitution without changing the value of the integral.

There are 8 individuals that go by the name of Sue Talbot. These individuals collectively are associated with 7 companies in 9 cities. The cities are Bloomington IN, Champlin MN, Driggs ID, Idaho Falls ID, ...

Using  $u$ -substitution in a situation that is a bit different than "classic"  $u$ -substitution. In this case, the substitution helps us take a hairy expression and make it easier to expand and integrate.
