

What is an electrical panel air conditioner?

Electrical panel air conditioners are designed for dissipation of heat from inside electrical enclosures and data racks. Air conditioning is based on the heat exchange between two separate air circuits. Air circulation inside the enclosure is separated from external ambient air, protecting the contents of the enclosure from dust and moisture.

How to choose an electrical panel air conditioner?

Proper sizing of an electrical panel air conditioner ensures effective temperature control and energy efficiency. Selecting a unit that is too small results in overheating, while an oversized unit wastes power and adds unnecessary cost. The main consideration is the heat load, typically expressed in BTUs per hour (BTUH) or watts. Suppose:
