

What is a pharmaceutical metal detection system?

We specialize in fully integrated pharmaceutical metal detection systems that can accurately detect metal contaminants in your pharma applications and efficiently reject them from the production line.

What is a multi-drug rapid test panel?

The Multi-Drug Rapid Test Panel is a rapid surfaces or solids screening test that can be performed without the use of an instrument. The test utilizes monoclonal antibodies to selectively detect elevated levels of specific drugs on surfaces and in solids. ?DIRECTIONS FOR USE?

Why should you use metal detection procedures for pharma product inspection?

Using metal detection procedures for pharma product inspection can not only help enhance your quality control, improve your metal detection procedures, and minimize costs, but can also support compliance with industry standards - such as the Federal Food, Drug, and Cosmetic Act (FD&C) and FDA regulations.

Can a metal detection system help you meet FDA compliance?

METTLER TOLEDO is a manufacturer of metal detection systems that can help you meet FDA compliance with metal detection in pharma. Using our systems to detect metal contaminants in pharma products can help improve your pharmaceutical manufacturing quality control.

The Multi-Drug Rapid Test Panel is a rapid surfaces or solids screening test that can be performed without the use of an instrument. The test utilizes monoclonal antibodies to selectively detect ...

Why use of metal detection is important in pharmaceuticals processing? Sophisticated metal detection can save your business from loss of revenue and reputational damage. Metal ...

What do the results mean? If your heavy metal blood test shows a high level of metal, you will need to completely avoid exposure to that metal. If that doesn't reduce enough metal in your blood, your ...

The major metals of potential health concern found in food, drugs (medicines), and dietary supplements are lead, cadmium, mercury, and arsenic. Other metals, such as chromium, copper, ...

Useful in the assessment of recent exposure to arsenic, cadmium, mercury, and lead. For chronic exposure or the determination of arsenic species, refer to Heavy Metals Panel 4, Urine with Reflex to ...

Carboplatin, an example of a metallopharmaceutical A metallopharmaceutical is a drug that contains a metal as an active ingredient. [1][2] Most commonly metallopharmaceuticals are used as anticancer ...

Metal complexes have shown significant potential as anticancer drugs due to their unique properties and

ability to inhibit tumor growth [1], [2], [3]. Platinum-based drugs, although widely used ...

"Metal Drugs" published in "Encyclopedia of Cancer"(Heavy) metals are often considered as "toxic," which is probably linked to several intoxications due to environmental contaminations, as ...

1. Introduction Metal compounds have been extensively used as therapeutic and diagnostic agents against diverse range of diseased conditions [1], [2]. Till date a significant number ...

Screening for metals in medicines and dietary supplements rarely indicates the presence of toxic metal impurities at levels of concern. The setting of heavy metal limits is appropriate for medicines and is ...

Programmable Therapeutics Through Deterministic Logic Moleculogic unifies Metal Drug Complexes (MDC), Functional Drug Complexes (FDC), and SEI-governed logic blueprints into a single platform ...

We specialize in fully integrated pharmaceutical metal detection systems that can accurately detect metal contaminants in your pharma applications and efficiently reject them from the production line.

According to the Ministry of Health Malaysia, every pharmaceutical and traditional medicine products are required to be analysed for heavy metals contamination under the regulations by National ...
