

What is liquid cooling technology?

Liquid cooling technology is a relatively new approach in data centre cooling compared to traditional air-cooled designs, and it typically uses fewer commercial off-the-shelf components. Designers and integrators need to help customers understand the TCO and the efficiency gains associated with liquid cooling systems.

Will liquid cooling systems be standalone?

Liquid cooling systems will not be standalone in the foreseeable future; they will be supplemented by traditional air-cooling technologies. This combination results in various ratios, such as 60:40 or 70:30 (Liquid:Air), depending on the specific solution.

Why do data centres need liquid cooling?

Increased heat raises the risk of equipment in data centres malfunctioning or catching fire. The challenges of using air cooling are exacerbated by the introduction of newer chips with higher heat loads. Consequently, the need for liquid cooling becomes more apparent.

Why is an HVAC unit necessary for a kiosk?

An HVAC unit is necessary for a kiosk as it maintains the optimal temperature and humidity level within the kiosk for peak reliability. Your provider will consult with deployers on the operational environment and make recommendations for the best cost/performance selection.

Wrapping Up Divorce is very common in the US, with approximately 40% of marriages ending in divorce or permanent separation. Some of the leading causes of divorce include abuse, ...

Details of Matt Painter's new contract have been released. The 19-year leader of Purdue's basketball program recently received an extension that will keep him in West Lafayette through the ...
