

What are some problems with NordVPN?

If you're dealing with very specific issues, use the list below to quickly find the right solution: Account issues. Connectivity and app issues. Streaming issues. Torrenting issues. Speed issues. Split-tunneling issues. Meshnet issues. NordVPN is an excellent VPN, but you could still experience some issues while using it.

Why is NordVPN not working?

Restart the NordVPN app. The app might be experiencing technical issues that interfere with your VPN connections. Simply exit the app, then launch it again to see if this fixes the problem. Turn off Threat Protection Pro/Threat Protection. NordVPN actually recommends disabling this feature if you're experiencing streaming issues.

How do I fix NordVPN issues?

The best way to fix most NordVPN issues is to check if your subscription is still active, make sure the NordVPN app is up-to-date, connect to a different NordVPN server, try a different VPN protocol, use the provider's obfuscated servers, change your DNS settings, reset the NordVPN app, and whitelist NordVPN in your antivirus or firewall program.

Is NordVPN worth it?

It's not worth it. Even the best free VPNs have limitations like limited server locations and congestion -- but at least they're safe to use. Many free VPNs can log and sell your data to third parties and even infect your device. If NordVPN isn't working, it's much better that you try to resolve the issue than switch to a free VPN.

Die Anmeldung bei bet365 habt ihr im besten Fall in wenigen Minuten hinter euch. Um euch den Prozess zu erleichtern, haben wir im Folgenden eine Schritt-für-Schritt-Anleitung zur ...

A place for all things related to NordVPN, online privacy and Internet security. Before asking for a tech question, please contact their official support team or visit the Help Center.
