

Which type of electrical box is best?

Metal electrical boxes are best for metal-sheathed cable or metal conduit. Weatherproof metal boxes for outdoor use are generally made of aluminum. Plastic electrical boxes are best for Romex or non-metallic cables. Choose an electrical box based on its intended purpose.

What is an electrical box used for?

Electrical boxes protect wire connections from short circuits and are essential for fire safety. They are commonly used for items like receptacles, ceiling fans, and outdoor outlets. Most devices require an electrical box, unless they are the type that contains its own wires.

What is a new work electrical box?

A new work electrical box is installed in an open wall. The box is nailed or screwed to the side of the wall studs. It is secure and strong. If you have open walls (before installing drywall), use a new work box rather than installing an old work box after the drywall has been installed. An old work electrical box is installed in a closed wall.

What is an old work electrical box?

An old work electrical box is installed in a closed wall. Sometimes called a retrofit box, this type of electrical box attaches to the drywall with wings or ears that clamp the box to the drywall. Standard rectangular boxes, or single gang boxes, are used for single light fixture switches and outlet receptacles.
