

What is underground modular tank?

Underground Modular Tank is an underground water storage tank used for rainwater control and management system, so it is also called Modular Rainwater Storage/Collection System, Underground Water Tank System or Underground Sewage System on the market. It is efficient, cost-effective and ecologically sustainable.

What is modular underground rainwater harvesting system?

Modular underground rainwater harvesting system to solve ground water ponding issue. Modular Tank System is a subsurface water infiltration storage tank for stormwater control and management system, and thus, it is also known as the Modular Rainwater Storage /Harvesting System, Underground Tank System and Sub-soil Drainage System in the market.

Are underground structures permanent or temporary?

Underground structures can be of temporary or permanent nature. Which function the steel structure needs to fulfil, depends on your project. Our sheet piles and strutting systems can retain soil and water in building pits and cofferdams.

What are the advantages of underground modular tank?

Underground Modular Tank has unique advantages, such as: high compressive strength allows use in traffic areas; interlocking system maximizes stability and installation; lower cost compared to concrete and metal storage systems; low storage and low transportation costs; and can meet all volume requirements.

For underground cabling, above ground route markers shall also be provided at every change of direction in the routing and at both sides of road or pipeline crossings, except when cable routing is ...

JENNMAR's Metal Stoppings are an economical solution for underground mine ventilation control. This alternative to conventional block stoppings is comprised of a set of vertically telescoping steel panels ...

It is efficient, cost effective and ecologically sustainable. The main function of Modular Tank is to allow on-site natural water infiltration and this prevent surface run-off. This Underground Tank System is ...

Established in 2005, with over 20 years of experience, we've become a leading name in metal and steel fabrication across Klang Valley. Whether it's a sturdy metal roof for your home, a stylish awning for ...

Our sandwich Panels may be used as walls of buildings, both external and internal, roofs and ceilings. Our passion is what drives us here today - to provide the most reliable solution through our quality ...

GALVANIZED STEEL IN-GROUND INTRODUCTION The use of steel underground is not new. There are many applications where steel is used in the ground, from simple applications like sign posts and ...

Steel sheet piles are the best solution as they can easily be installed, extracted, and reused. They can be used in limited space. In combination with the delivery of sheet piles, we provide complete ...

We are One Stop Steel & Fitting Supplier that specialised in supply the following processing services and steel products in Mild Steel, Carbon Steel, Stainless Steel, Aluminum, Hot Roll, Cold Roll, ...

The main function of the Underground Modular Tank is to allow natural water penetration on site and prevent water loss. The Underground Modular Tank is most suitable for flat ground areas for ...

Underground mines use two principal types of rock reinforcement - tensioned mechanically anchored rockbolts and untensioned grouted or friction anchored dowels. It is important that the different ways ...

2.2 Tank panels Standard tank panels are manufactured from a pre-galvanized steel sheet, maximum thickness 5mm, with approximate overall dimensions of 2530mm, 2580mm or 2630mm long, ...

Underground Wiring Article 501 calls for underground wiring to be installed in threaded rigid conduit or threaded steel intermediate metal conduit. Threaded rigid conduit is preferred ...
