

Stop casing double doors from hitting battery

Do double interior doors have a ball catch?

I'm installing double interior doors for the master bedroom. Unlike many double door installations where one of the doors is locked into place with a flush bolt, these doors will each have a ball catch at the top. This will allow each door to be opened individually or both at the same time. I'm not concerned with having these doors lock.

Can you use a door jammer instead of a barricade?

Instead of a door barricade (or in combination with that), you can use a security bar (aka door jammer) to reinforce your door from the inside to prevent a kick-in. A good quality and sturdy security bar can protect both hinged and sliding doors. The height of these security bars is adjustable and they fit most doors.

How to strengthen a door from the inside?

Another powerful way of reinforcing your door from the inside is to install a door barricade. Its major advantage is that it doesn't rely on the sturdiness of your door, instead, it uses the strength of the floor. There are different models on the market and all of them can be installed rather easily and quickly.

What is a door baseboard & spring stop?

Baseboard and flexible spring stops are essential for preventing doors from opening too far and causing damage to walls, door handles, or the doors themselves. Available in flexible coiled steel or solid metal designs. Roller bumpers are essential door hardware devices designed to prevent doors from damaging walls and other structures when opened.
