

Do metal buildings need to be waterproofed?

Waterproofing is an essential consideration for any metal building. Taking steps to keep water out can extend the life of your structure and keep it functioning in any weather conditions. This guide will detail how to waterproof a metal structure. You will learn the benefits of waterproofing and how to do it.

Which products are waterproof?

Our products include plastic, stainless steel, metal plate, and aluminum enclosures, ensuring the highest waterproof performance, compliant with the following NEMA standards and IP ratings: NEMA 3S: Suitable for outdoor environments, effectively preventing rain and wind-blown rain.

How do you waterproof a metal building?

Keeping water outside is critical. Here are steps you must take to waterproof your metal building. Rain and snowmelt can seep, drip, or flow through cracks or air leaks in the exterior walls. Moisture can also infiltrate your structure through the joints where the walls meet the concrete slab.
